

Start here.

The grid you just opened is a tutorial. This guide walks through every tile on it, how to move and size things, and how to hand someone the link.

01

This grid is the tutorial

Every tile on your starter grid is here to show you something. Poke at them, then replace them with your own. Nothing on it is load-bearing.

- 1 · GIF An image tile. Drop any picture, GIF or short video onto it to swap it.
- 2 · WELCOME A text tile. Click in and type — formatting lives inside the tile.
- 3 · PROFILE Photo, name, title, bio. Most pages open with this one.
- 4 · VIDEO **Watch this first.** A walkthrough of building a grid, start to finish.
- 5 · CHAT A public wall — anyone visiting can leave a message. You can delete any of them.
- 6 · LINK Our Discord. Paste any URL and it pulls in the title, image and icon.
- 7 · DOCS You are here. A PDF, a Markdown cheat sheet and a Word file, side by side.

No save button.

Every change is written as you make it. The page you edit is the page people visit.

`Ctrl / ⌘ + Z` undo

`Ctrl / ⌘ + Y` redo

The buttons also sit in the corner of the page.

02

Adding tiles

The tile bar floats at the bottom of the screen, one button per kind of tile. Pick one and it drops into the first free space.

Text

Headings, notes, a paragraph about yourself.

Profile

Name, photo, title and bio in one block.

Chat

A message wall visitors can write on.

Image / Video

Upload, crop, caption, or point it at a link.

Link

Paste a URL; the preview fills itself in.

Embed

Something live from elsewhere — a player, a form, a board.

Map

A place. Pan it, search it, or leave it pinned.

Campfire

A small warm thing for a corner of the page.

Documents BETA

PDF, Word, Markdown and text files, opened in a reader.

Paste a link anywhere on the page and it lands as a link tile.

Drop a file from your desktop straight onto the grid — images, video and documents all work.

Documents and **Smart Text** (a text tile that helps you write the first draft) are still rolling out, so they may not be on your bar yet.

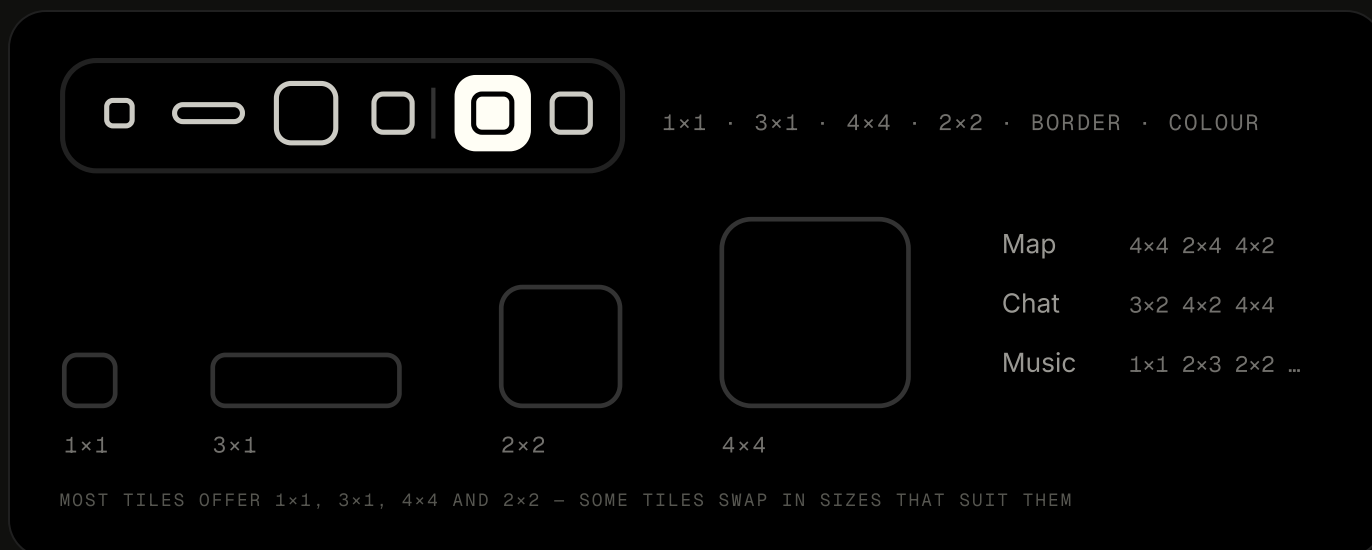

03

Moving and sizing

Drag a tile to move it. Drag its bottom-right corner to resize it. Whatever is in the way shuffles aside — tiles never overlap.

Or skip the dragging: click a tile once and its toolbar appears, with the common sizes as buttons. Sizes are counted in grid squares, **columns × rows**.

GRAVITY

In the grid menu. On: tiles rise to fill the space above them. Off: a tile stays exactly where you dropped it, gaps and all.

GRID GUIDE

Also in the grid menu. Draws the empty slots while you work so lining things up is easy. Only you ever see it.

04

Making a tile yours

Click a tile and a small toolbar appears below it. What it offers depends on the tile — a photo can be cropped, a link cannot.

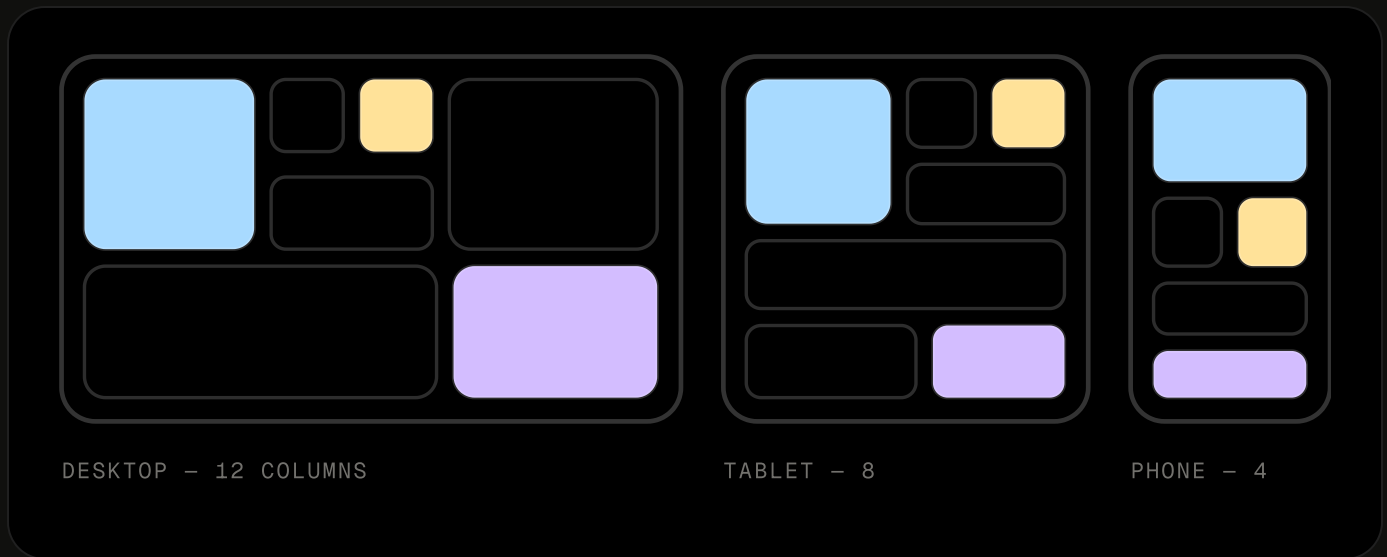

SIZE	The preset sizes. Handy on a phone, where dragging a corner is fiddly.
BORDER	Turn the outline off and the tile floats on the background instead of sitting in a box.
COLOUR	Background and text colour, per tile. Two or three accents across a page is plenty.
CROP	Photos and videos: choose which part of the picture fills the tile.
LINK	Turn the whole tile into a link. Click again to take the link off.
CAPTION	A line of text under a photo or a video.

Hover a tile and a second set of controls appears in its corner: **duplicate**, **copy**, **download**, **open link** and **delete**. Delete is the red one – and **Ctrl / ⌘ + Z** brings it back.

05

Phone and desktop

The same page is twelve columns on a desktop, eight on a tablet and four on a phone. Tiles reflow to fit, and most of the time that is the end of it.

If the automatic reflow puts something in an odd place, fix it by hand. Switch to Tablet or Mobile with the device buttons, arrange the tiles, then open the grid menu and choose **Save Tablet Layout** or **Save Mobile Layout**. From then on that layout is yours: **Update Layout** saves later changes, **Reset to Auto** hands it back to the reflow.

DESKTOP	12 columns. The layout everything else is derived from.
TABLET	8 columns. Tiles wider than 8 are trimmed to fit.
PHONE	4 columns. Worth a look before you share — most people open links on a phone.

A dot under a device icon means you have saved a layout for it.

A size wider than your window is **view only** — you can look, not edit.

06

The grid menu

Everything that belongs to the whole page rather than one tile lives in the menu on the left edge — starting with the address people will use.

GRID PAGE	Your page address, at the top. Click it to copy the link.
DARK MODE	Light or dark — for this grid and for everyone who opens it, not just your browser.
GRAVITY	Tiles rise to fill gaps, or stay exactly where you put them.
GRID GUIDE	The dotted empty slots while you edit. Visitors never see them.
PUBLIC TEMPLATE	Allow Public Template lets anyone duplicate your layout as a starting point.
BACKGROUND	Add Background Image , or open the arrow beside it for a flat colour. Remove either from the same place.
SHARE IMAGE	Social Share Image — the picture shown when your link is pasted into a chat. 1200 × 630.
DUPLICATE	A full copy of the grid, or Structure Only — the layout without the content.

Sharing. There is no publish step. Your page is live at its address the whole time you build it — the share button just copies the link.

Remix, if your account has it, lets a visitor start their own page from yours. Each tile has its own switch for whether its content travels with the copy.

07

The tile you're reading

A documents tile holds several files and opens them in a full-screen reader. This one carries three, so you can see how each kind looks.

.PDF

This guide

Shown as real pages, exactly as designed. Thumbnails down the side, zoom, and a two-page spread.

.MD

Sizes cheat sheet

Opens in a dark reader. Its headings become a clickable table of contents on the left.

.DOCX

Grid recipes

Laid out on letter-size paper, with the author's fonts, tables, headers and footers.

ACCEPTS

PDF, Word (`.docx`), Markdown (`.md`) and plain text (`.txt`). Older `.doc` files are offered as a download.

SWITCH FILES

The file strip at the bottom of the reader, the arrows at the sides, or `←` `→` on the keyboard.

ZOOM

PDFs: `Ctrl / ⌘ +` and `-`, `Ctrl / ⌘ 0` for 100%, `Shift 1` to fit.

CLOSE

`Esc`, or the `×` in the top right.

TITLE

Give the tile its own title and description, and a colour like any other tile.

Ideas for yours: a CV, a press kit, a menu, a zine, a price list, slides from a talk, a reading list in Markdown – anything people might want to open without leaving your page.

08

Now make it yours

The starter grid is a suggestion, not a template. Take it apart.

- ☐ **Watch the video tile.** Then delete it, or keep it for later.

- ☐ **Fill in the profile tile.** Name, photo, a sentence. It does most of the work.

- ☐ **Add three links** to the things you actually want people to open.

- ☐ **Put one big tile on the page** — a photo, a map, a video — so it is not all small squares.

- ☐ **Delete anything you are not using.** Empty tiles read as unfinished.

- ☐ **Pick a background** and, if you like, a colour for one or two tiles.

- ☐ **Check the phone layout** and save it if the reflow put something in an odd spot.

- ☐ **Set the social share image**, then copy your link and send it to a friend.

- ☐ **Swap these documents for yours.** Or delete the tile — hover it, hit the red button.
